Preface xiii

Current Problems in Statistical Mechanics xv

Program of the Symposium xvi

Abstracts of talks xvii

Contents xxii

Michael Fisher at King's College London
C. Domb 1

Waiting to be made
R. Hoffmann 22

Numerical complex zeros of the random energy model
C. Moukarzel and N. Parga 24

The zeroes of the partition function of the random energy model
B. Derrida 31

Fisher zeros and Julia sets: a multifractal analysis
B. Hu and B. Lin 38

Transmission of order in dilute magnets
J. Adler 45

Self-avoiding walks
J.M. Hammersley 51

Effects of random fields on bicritical phase diagrams in two and three dimensions
R.J. Birgeneau, A. Aharony, R.A. Cowley, J.P. Hill, R.A. Pelcovits, G. Shirane and T.R. Thurston 58

Random walks in random media with random signs
M.P. Gelfand 67

Entropy of the random triangle–square tiling
H. Kawamura 73

Vibrational melting and its possible relevance to amorphous silicon
F.H. Stillinger 79

Pathologies of the infinite-*n* limit of random anisotropy: spin glass transition or local crossover?
D.S. Fisher 84

Fractal study of polystyrene latex and silica particle aggregates
Z. Zhou and B. Chu 93

On solving the Ising model functional relation without elliptic functions
R.J. Baxter 101

Locus of the tricritical transition in a two-dimensional q-state Potts model
B. Nienhuis 109

Three-state chiral Potts models in two dimensions: integrability and symmetry
J.C. Anglès d'Auriac, J.M. Maillard and F.Y. Wu 114

Bulk value of the central charge in conformally invariant critical phenomena
G.A. Baker Jr. and R.R.P. Singh 123

Fisher renormalisation and conformal field theory
P. Mansfield and R.B. Stinchcombe 131

Star–triangle equations and multicomponent chiral Potts models
H. Au-Yang and J.H.H. Perk 139

Contact models of a collapsing branched polymer
D.S. Gaunt 146

Critical endpoints in the spherical model with rapidly decaying power-law interactions
M.C. Barbosa 153

On the maintenance of disorder
R. Brout 161

The Fisher–Hartwig conjecture and generalizations
E.L. Basor and C.A. Tracy 167

Effect of molecular elongation on liquid–vapour properties: computer simulation and virial approximation
E. de Miguel, L.F. Rull and K.E. Gubbins 174

Critical behavior of interacting manifolds
R. Lipowsky 182

Confluent singularities in 3D continuum ϕ^4 theory: resolving critical point discrepancies
B.G. Nickel 189

Tricritical behavior in complex fluids
P. Pfeuty 197

Determination of the anomalous dimension Green–Fisher critical exponent η by light scattering in a fluid
R.A. Ferrell 201

Finite-size scaling in layered systems with surface ordering
H. Li, M. Paczuski, M. Kardar and K. Huang 207

Renormalisation group theory for two problems in linear continuum mechanics
N. Goldenfeld and Y. Oono 213

Line liquids
D.R. Nelson 220

Lattice covering time in D dimensions: theory and mean field approximation
A.M. Nemirovsky and M.D. Coutinho-Filho 233

Finite-size scaling: new results
V. Privman 241

Correlation function decay in linear continuum systems
G. Ruppeiner 247

Field induced magnetic phase transitions: models for competing interactions
W.P. Wolf 253

Effective renormalization group algorithm for transport in oil reservoirs
A. Aharony, E.L. Hinrichsen, A. Hansen, J. Feder, T. Jøssang and H.H. Hardy 260

Vicious walkers, flows and directed percolation
D.K. Arrowsmith, P. Mason and J.W. Essam 267

Scaling of fractal flow
M. Ferer, W.N. Sams, R.A. Geisbrecht and D.H. Smith 273

Learning science through guided discovery: liquid water and molecular networks
B. Ostrovsky, P.H. Poole, F. Sciortino, H.E. Stanley and P. Trunfio 281

Plates, fences and needles: an example of the Skoulios effect
E. Raphaël and P.G. de Gennes 294

Nucleation and growth in the coexistence region
E. Domany and S.E. Nagler 301

Tricritical phenomena in bimodal polymer solutions II. Turbidity measurements in the three-phase region
W. Shen, G.R. Smith, C.M. Knobler and R.L. Scott 311

Influence of a deterministic force on random systems
M. Gitterman 324

Stochastic Liouville equation approach within non-equilibrium thermo field dynamics
T. Arimitsu, M. Ban and T. Saito 329

The character of the metastable phase singularities near the spinodal line
M. Calvo 339

On the nature of supercooled and glassy states of matter
U. Mohanty 345

Numerical solution of the Swift–Hohenberg equation in two dimensions
H.-w. Xi, J. Viñals and J.D. Gunton 356

Two-tag correlation functions in one-dimensional lattice gases
S.N. Majumdar and M. Barma 366

Models for intermediate time dynamics with two-time boundary conditions
L.S. Schulman 373

Dynamics of Ising ferromagnets in droplet model
D. Stauffer and J. Kertész 381

Multifractality of the harmonic measure on fractal aggregates, and extended self-similarity
B.B. Mandelbrot and C.J.G. Evertsz 386

The iterative evolution of complex systems
T. Erber and D. Gavelek 394

Crossover from Ising to mean-field critical behavior in a kinetic Ising model with competing flip and exchange dynamics
M. Droz, Z. Rácz and P. Tartaglia 401

Onset of scale-invariant pattern in growth processes: the cracking problem
R. Blumenfeld and R.C. Ball 407

Formulae for cycles in the Mandelbrot set
J. Stephenson 416

Finite-size effects for surface tension and capillary waves
D.B. Abraham 421

How universal is critical-point wetting?
J.O. Indekeu 428

Microscopic derivation of the effective interface Hamiltonian for liquid–vapor interfaces
S. Dietrich and M. Napiórkowski 437

Competition between self-attraction and adsorption in directed self-avoiding polymers
D.P. Foster and J. Yeomans 443

2D critical wetting: revisited
M. Zapotocky and T. Halpin-Healy 453

The two-dimensional Ising model with two defect lines – a Monte Carlo study
W. Selke 460

New phenomena predicted for films on weak-binding surfaces
E. Cheng, A. Chizmeshya, M.W. Cole, J.R. Klein, J. Ma, W.F. Saam and J. Treiner 466

Density functional theory beyond the surface tension. Interfacial width, elastic bending constants and line tension
A. Robledo, C. Varea and V. Romero-Rochín 474

Phase transition shifts in films
K. Binder and D.P. Landau 483

Adsorption and wetting on moveable walls
P.D. Gallagher and J.V. Maher 489

Sum rules for interface Hamiltonians
L.V. Mikheev and J.D. Weeks 495

Universal finite-size scaling amplitude for the critical interfacial tension of a 2D Lennard-Jones mixture
K.K. Mon 505

Effects of localized perturbations on the properties of the $S=\frac{1}{2}$ Heisenberg antiferromagnet on the square lattice
J. Oitmaa and D.D. Betts 509

Strange vortex structures in layered superconductors
V.L. Pokrovsky 517

Scaling thermodynamic model for type I superconductors
M. Kaufman 523

Renormalization group for interacting fermions in $d>1$
R. Shankar 530

Quasi-long-range order in anyon superfluids
D. Boyanovsky and D. Jasnow 537

Quantum vector spin-glass in a field: results for general spin
Y.Y. Goldschmidt and P.-Y. Lai 544

Hall effect at the magnetic-field-tuned superconductor–insulator transition
M.P.A. Fisher 553

Can a phase transition make quantum mechanics less embarrassing?
N.D. Mermin 561

Scaling, localization and bandwidths for equations with competing periods
D.J. Thouless and Y. Tan 567

Screened Coulomb interaction or Hubbard model?
D.C. Mattis and D. Henderson 578

Fractal clusters in the learning curve
J.T. Bendler and M.F. Shlesinger 585

Fractal aggregates, and the current lines of their electrostatic potentials
C.J.G. Evertsz and B.B. Mandelbrot 589

Michael Ellis Fisher – some biographical details 593
Theses supervised by M.E. Fisher and list of postdocs 596
Publications of M.E. Fisher 599
List of contributors 613
